

The FCC should stand up for Internet users by safeguarding net neutrality. The FCC should reject Chairman Ajit Pai's proposal to give the ISP monopolies like AT&T, Comcast, and Verizon the legal cover to create Internet fast lanes, stripping consumers of the vital access and privacy safeguards we demanded and won just two years ago. I'm worried about creating a tiered Internet with "fast lanes" for certain sites or services because ISPs could have too much power to determine what I can do online. Thankfully, the current FCC regulations ensure that Internet providers can't block or slow our access to certain websites or create Internet "fast lanes" by charging websites and online service money to reach consumers faster. That's the right kind of forward-looking approach to ensure the Internet remains a level playing field that benefits consumers and small businesses as well as entrenched Internet companies. Chairman Pai's proposed repeal of the rules would help turn Internet providers into Internet gatekeepers with the ability to veto new expression and innovation. That's not how the Internet was built, and that not what we want. These isps aren't worried about the customers.. they are only worried about their shareholders and profits. The Internet isn't a luxury any more. It is a vital component of people's livelihoods. From applying for college to applying for a job it has become part of every day infrastructure. Thank you for keeping Title II net neutrality rules in place to protect Internet users like me.
